Briefing Malware

CERT Capgemini CIS

From January 1st, 2022, Capgemini is bringing together its cybersecurity forces, originating from Sogeti and Capgemini Cloud Infrastructure Services, into a single entity, which operates under the Capgemini brand.

TLP:WHITE

About this report

This report aims to identify the Tactics, Techniques and Procedures (TTP's) of the most known malwares along this year on the *ANY.RUN* platform © from the 07/02 to 14/02.
This analysis is based on the *MITRE ATT&CK* © matrix in the evaluation of the TTP's most exploited by cyber actors in order to prioritize the vigilance effort of the detection and incident response teams.
A remediation solution is proposed in the "Mitigations" tab for each technique.

Please note that the sub-techniques are now available for the Enterprise Matrix of Mitre ATT&CK. We work on it to add more and more details about these sub-techniques in the present communication. You can click here to know more about this new way of analysing TTPs of malwares.

Most Recurrent Malwares

1	Emotet (ID Mitre: S0367)
2	Redline (NC)
3	njRAT (ID Mitre: S0385)
4	AsyncRAT (NC)
5	Orcus (NC)
6	FormBook (NC)
7	Lokibot (ID Mitre : S0447)
8	Remcos (ID Mitre : S0332)
9	Nanocore (ID Mitre: S0336)
10	DcRAT (NC)

Capgemini

Most observed malware's TTPs overlaps

A graphic presentation of TTPs overlaps between malwares is available in the next pages. For each tactic, you can find the listing of the names and the IDs of the techniques.

List of most leveraged techniques

To optimize the visibility of the results, only techniques shared by at least 3 malwares are listed here (from the most to the less shared).

T1547	Boot or Logon Autostart Execution
T1547.001	Registry run keys/Startup folder
T1056	Input Capture
T1112	Modify registry
T1027	Obfuscated files or information
T1012	Query registry
T1059	Command and scripting interpreter
T1059.003	Windows Command Shell
T1055	Process injection
T1056.001	Keylogging
T1083	File and Directory Discovery
T1057	Process discovery
T1105	Ingress tool transfer
T1053	Scheduled Task/Job
T1070	indicator Removal on host
T1082	System Information Discovery
T1560	Archive Collected Data
T1125	Video capture
T1571	Non-standard port
T1106	Native API
T1204	User Execution
T1059.001	PowerShell
T1059.005	Visual Basic
T1070.004	File Deletion
T1555	Credentials from Password Stores
T1555.003	Credentials from Web Browsers
T1120	Peripheral Device Discovery
T1021	Remote Services
T1123	Audio Capture
T1113	Screen capture
T1132	Data Encoding
T1041	Exfiltration Over C2 Channel

What's new?

Redline (NC)

Attackers Disguise RedLine Stealer as a Windows 11 Upgrade

#HP Threat Research team discovered a new campaign related to the latest operating system from #Microsoft, Windows 11.
After #Microsoft announced that they started the last phase of upgrade to Windows 11 on January 27th, a suspicious domain named windows-upgraded[.]com which personalizes a typical Microsoft website where anyone could download a ZIP file, Windows11InstallationAssistant.zip, claiming the capability to install the new system but delivering the information stealer #Redline.
This opportunistic campaign is similar to another campaign in December 2021 where a phishing website was created impersonating social network #Discord also delivering Redline.
#Redline is an information stealer following a Malware-as-a-Service model and running at least since 2020. It steals #credentials, #browser history, #credit card information as well as taking desktop #screenshots or saving #keystrokes. Redline also allows to execute commands on the victims and upload or download files.
