About this report

This report aims to identify the Tactics, Techniques and Procedures (TTP's) of the most known malwares along this year on the *ANY.RUN* platform © from the 28/03 to 04/04 .
This analysis is based on the *MITRE ATT&CK* © matrix in the evaluation of the TTP's most exploited by cyber actors in order to prioritize the vigilance effort of the detection and incident response teams.
A remediation solution is proposed in the "Mitigations" tab for each technique.

Please note that the sub-techniques are now available for the Enterprise Matrix of Mitre ATT&CK. We work on it to add more and more details about these sub-techniques in the present communication. You can click here to know more about this new way of analysing TTPs of malwares.
