Empowering frequent and comprehensive testing to accelerate the launch of today’s complex applications

It’s no secret—in today’s world, everything is connected. Most of the time, this connectivity is viewed as a benefit; however, in the testing space, connectivity can lead to inefficiency. When modern day application landscapes are complex with a high level of integration, testing can be expensive, time consuming and hard to control. Defects in one application can delay the testing of all connected applications. This translates to time and money wasted, not to mention quality of testing may be at stake. Now more than ever, end-to-end automation is becoming critical during early development and testing phases.

If this scenario sounds familiar, Sogeti’s testing experts can help. Sogeti’s most innovative testing solution, Service Virtualization, allows testers to be less dependent on test infrastructures, avoiding the problems of interconnectivity.

Sogeti’s Service Virtualization addresses the pain points of testing that come with connectivity

**Challenge 1**
Experiencing downtime during test execution due to test environment issues

Sogeti’s Service Virtualization allows teams to virtualize parts of the landscape known as trouble makers and delayers during test execution—improving reliability of development and testing environments and improving uptime up to 90%. This means resources are able to test 4-5 days a week on reliable test environments.

**Challenge 2**
Relying on external 3rd party interfaces in test environments that cost money and facilitate downtime

Sogeti’s Service Virtualization allows these external interfaces to be virtualized, reducing both dependencies and significant costs.

**Challenge 3**
Experiencing end-to-end testing solution with Service Virtualization

Sogeti’s Service Virtualization enables agile teams to set up an end-to-end landscape using stubs allowing them to develop and test software in a representative landscape and offering flexibility many traditional landscapes lack. This increases the test coverage and the overall testing quality.
The final key to success
Our solutions are built around the latest IBM Rational Suite—including Rational Integration Tester and Rational Test Virtualization Server—so you’re aligned with the best technologies.

Rational Integration Tester
Simplifies integration testing, allowing fast creation and easy maintenance of virtualized services for testing and development.

Rational Test Virtualization Server
Helps you to manage virtualized services in one central repository and allows you to easily turn on or off the services on our development and test environments. Rational Test Workbench Helps increase test reliability and reduce costs through automation.

Rational Test Workbench
Helps increase test reliability and reduce costs through automation.

As a IBM Premiere Business Partner since 2001, Sogeti has access to the latest innovations on all of these products as well as training, support and infrastructure to demonstrate the added value of Service Virtualization in your specific situation. We pass down our benefits to you in order to make sure you have the best solution possible.

As one of only a few globally managed partners, has continuously developed innovative IBM solutions and has recognized Sogeti for outstanding service and delivery with multiple IBM Beacon awards.

Sogeti has expertise across the full IBM suite with specialized services in Cognos, Connections, Storage, Commerce, Cloud and Social Media.

Contact your local Sogeti representative today to learn more about Sogeti and our solutions or visit www.sogeti.com/ibm
