

Flying high

The sky's the limit

By teaming up with Avencod on the testing factory, Sogeti was able to help reverse a 10% drop in productivity and boost inclusivity for Airbus Helicopters' design department with a Quality Engineering solution built around inclusion, ambition and partnership to target business operations critical applications, to sky-high positive feedback.

The factory is composed of a team with neuroatypical staff evolving on an integrated platform at Sogeti. This is a first for Avencod to have its consultants evolve outside its walls; and this thanks to Sogeti with the establishment of a project platform.

Working together, a blended team not only saw a 39% increase in test coverage, 20% increase in change requests delivered and 85% increase in pre-production identification of anomalies, it also helped foster and more inclusive working environment for diverse teams. All this was achieved in just six months, by Sogeti working with Avencod and Airbus Helicopters to keep inclusivity and productivity flying high.
