

Intelligence unlocked

*Right here.
Right now.*

Turning internal knowledge into a strategic asset

Swedish metals and technology company Alleima was sitting on decades of knowledge and documentation, but it was fragmented across different departments and hard to find and use. They wanted a secure, AI-drive knowledge platform that could produce the business intelligence they needed to guide decision-making, underpin productivity and shorten the innovation cycle.

We put that plan into action, working closely with the client to turn their historic intelligence into a powerful asset. Based on proven Microsoft Azure technology, we developed an intelligent platform using RAG and GPT-4.1, to search and analyze a vast quantity of documentation in seconds. Access is managed thanks to Microsoft Entra integration, while the Azure environment ensures security and compliance.

Now Alleima team members can access the information they need instantly via a bespoke interface. They no longer need to spend time searching, uploading or analyzing; freeing up their time for more collaboration and innovation. And thanks to inbuilt scalability, Alleima can deploy a tried-and-true solution to other parts of the business in the future.
