

Nine weeks in 24 hours.

Top minds from EDF Energy and Sogeti collaborate to enhance operational responsiveness.

When EDF Energy joined forces with SogetiLabs, our research and innovation leaders, innovation moved fast and with purpose, tackling three real-world challenges. The teams were guided by a compressed innovation (Thinkubator) approach, designed as an AI acceleration workshop to rapidly turn ideas into practical, usable outcomes. The focus was clear: move beyond theory and turn critical business pain points into tangible solutions and working prototypes.

What made the difference was true collaboration. EDF brought clarity on the challenges that mattered most, without prescribing the answers, creating space for fresh thinking and bold ideas. Teams challenged assumptions, flipped perspectives, and uncovered insights that redefined what the 'real problem' actually was.

The outcome spoke for itself, delivering three implementable solutions with clear value for EDF's ecosystem. From improving emergency response to

strengthening preparedness, every prototype had a real place within the organization. Crucially, the workshop demonstrated how AI can be applied in a practical, outcome-led way, helping organisations move from ambition to action on their AI journey. Proof that when you ask what's valuable and actually build it, innovation delivers impact, fast.

"I've not seen anything like it, compressing something that should be 9 weeks into 24 hours, and going with the line *nothing is impossible.*"

EDF Energy Executive

Our local teams work side-by-side with clients, creating outcomes that can scale, **Right here. Right now.**
