

Supercharging Kaizen with AI mentors.

25% faster Kaizen, powered by AI mentors

Fortive, a global industrial tech leader, had hit a wall. Kaizen events were slowing down, teams were buried in spreadsheets, chasing scattered data, and leaning heavily on SMEs to maintain momentum. Bottlenecks, burnout, and missed opportunities were rife.

With our help, they were able to flip the script.

By introducing AI-powered agentic mentors, we helped Fortive reimagine how teams tackle problem solving and value stream mapping. The mentors act like always-on experts, to guide teams through PSP and VSM, automate analysis, and pull insights from a centralized knowledge base, instantly.

With no more manual number-crunching, and no more waiting on expert input, teams can now upload data and get instant Pareto analysis, refine PSR reports, and access best-practice templates on demand.

Whether it's a seasoned operator or a first-time participant, everyone gets real-time guidance when they need it the most.

The impact has been significant. Over 25% efficiency gains in problem-solving activities, faster insights, less manual effort, and a dramatic drop in SME dependency. But most importantly, Fortive didn't just speed things up, they made continuous improvement scalable.

AI mentors didn't replace expertise, they amplified it. And now, Kaizen at Fortive runs smarter, faster, and everywhere.

Our local teams work side-by-side with clients, creating results that scale, **Right here. Right now.**
