

AI people *power.*

The City of Raisio launches a people-first path to AI with Microsoft 365 Copilot

In the city of Raisio, the introduction of AI put people not technology at the heart of the project. When the city's strategy elevated data to make it a key enabler of everyday work, it sparked a learning journey, driven by Microsoft 365 Copilot and human-centred change management, that ensured progress was made safely, gradually, and with a shared learning spirit.

As part of a new city strategy, Raisio set out to provide government employees with the technology and training needed to use AI effectively and safely.

The city partnered with Sogeti, part of the Capgemini Group, which helped to define governance for the use of AI and establish a training program that helped educate and empower employees.

The benefits included accelerating common tasks, increasing awareness of AI's impact, and providing thorough, adaptive AI-focused training.

*"Sogeti helped us transform our culture by combining technical expertise with a **deep understanding of our needs.**"*

Eero Rostiala, CIO, City of Raisio

Our local teams work side-by-side with clients, creating outcomes that can scale,
Right here. Right now.
