

AI Trust & Assurance.

How we assess

4 Step Evaluation:

System profiling

Provide unclassified details of AI system's context and design

Business impact scoring

Rate how critical each quality dimension is, these scores translate into damage potential for associated risks

Risk identification

Identify the risk in assessment scope

Risk classification & coverage

Review a visual heatmap of risks with critical to Very low ratings and priority scores

Outcome: A comprehensive **AI Quality Assessment report** that documents your risk profile and **test strategy** – moving you from AI risk to confidence and compliance.

Client outcomes

- Risk Reduction & Trust in AI Outcomes
- Regulatory Readiness ensuring audit-ready compliance and responsible AI practices
- Data-Driven Decisions delivers risk coverage report enabling confident go/no-go decisions for AI deployments
- Prioritized testing helps Faster time to market
- Continuous Improvement on AI system quality over time

Connect with us for an **AI risk assessment workshop (5–10 days).**

Discover risks, prioritize testing, and fast-track AI adoption with confidence
